

Client Focus:

Hospital

Power your supply chain transformation:

- ▶ **Stocktake** – Track product details, expiry dates, lot & serial numbers
- ▶ **Catalogue** – Access over 5 million clinical product barcodes
- ▶ **Scan4Safety** – Expert guidance from business case to go-live
- ▶ **GS1** – Start today, save costs

SCAN4SAFETY
Patient. Product. Place. Process

Stocktake

Effective stocktaking is essential during both the financial year-end and supply chain transformations, especially in high-cost areas.

Signetor's advanced scanning solution, paired with our extensive healthcare product catalogue featuring over 5 million clinical barcodes, ensures fast, accurate stock capturing.

We can scan and capture GTIN, expiry dates, lot numbers, and serial numbers – helping not only with product identification but also with reporting expiry issues.

By integrating your catalogue, purchase order data, and the NHS Supply Chain catalogue, Signetor creates a unified price book, ensuring more products are accurately priced.

Reports

Once your pricing information is loaded and the stocktake is complete, Signetor will generate a detailed reporting package, complete with a full audit trail.

► **100% Stock Visibility** – View stock by location.

► **Expired Stock Value** – See the value of expired stock by department.

► **Upcoming Expirations** – Gain visibility into stock expiring within the next 30-90 days, broken down by department. This provides a more accurate estimate of annual stock expiry value.

For a more in-depth financial analysis or when preparing a catalogue for inventory system implementation, enhanced stocktake reports can be provided, including:

► **Consignment Stock Levels vs Actual Stock Levels**

► **Catalogue Completeness** – Are all products counted in the stocktake in your catalogue?

Scan4Safety

With over 10 years of experience in Scan4Safety solutions, Signetor offers expert advice and support, including:

- Full Scan4Safety implementation from
 - Building the Business Case
 - High Level Design
 - Project Management
 - Build & Go Live

Catalogue Cleanse & Enhancement

Optimize your data to streamline inventory management, track & trace, and procedure-based costing systems..

- ▶ Supply missing barcodes
- ▶ Standardize unit-of-measure types (e.g., Each, Pack, Box)
- ▶ Standardize supplier names
- ▶ Identify missing data elements (e.g., contract reference, pricing)

GS1 Roll Out

If a full Scan4Safety rollout isn't in your budget, we recommend investing in a GS1 adoption program. There are two key reasons for this:

Lower Cost Roll Out

The lowest cost GS1 roll out uses a hospital's natural refresh cycle, for example, staff identity badges are typically updated every 3 years and surgical trays must be sterilised at least every 12 months. If GS1 is only implemented when a transformation like Scan4Safety is required there will be additional costs and delays to the project as staff identity badges are refreshed early, and surgical trays are reprocessed to update the exterior labels.

Stop Proprietary Barcode System Implementation

By adopting GS1 standards now, you can ensure that all new IT systems are GS1-ready and can be thoroughly tested before purchase. This proactive approach will reduce future implementation and integration costs. For example, many NHS staff ID badges and patient wrist bands feature proprietary

barcodes for a single application such as blood bank or diabetes. Switching to GS1 barcodes today will prevent the spread of proprietary barcodes that only work with a single application, avoiding costs and complications undoing "quick" fixes.

Investing in complete product barcode catalogues and GS1 identification for patients, staff, locations, and surgical trays will make implementing Scan4Safety simpler, lower cost, quicker whilst delivering enhanced operational information sooner.

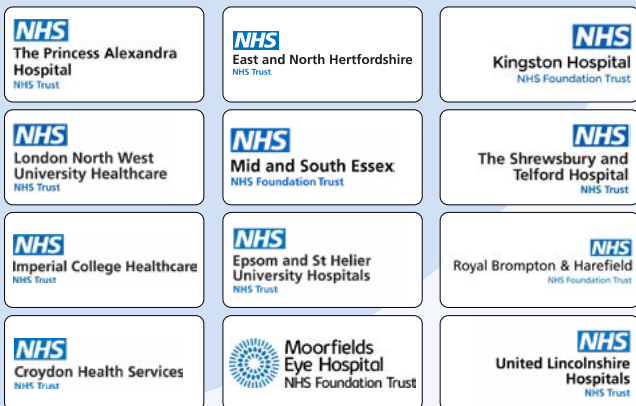

About Signetor

Founded in 2017 Signetor specialises in Healthcare. We have developed systems to work in this demanding environment and built a barcode catalogue of over 5 million clinical and pharmacy products. We have worked with many NHS acute providers on supply chain and Scan4Safety projects from design to go-live.
