# SIGNETOR

Client Focus:

# Stocktake Partner

## Increase Revenues by

▶ Expanding into new markets with expert guidance.

▶ Introducing new services like label printing to help modernize B2B wholesalers and manufacturers.

▶ Leveraging Signetor's 5 million hospital clinical & retail pharmacy products data to better serve your healthcare customers.

## Reduce Costs

▶ Flexible system, easy to implement.

▶ Support for everything from simple stocktakes to more complex customer needs.

▶ Assistance during physical stocktaking to keep your team on track.

▶ Efficient back-office, delivering customer reports quickly.

▶ Pay no development costs and have access to all Signetor system updates.

# Stocktake System

**Scanners at Location**

*WiFi only required to upload / download data*

**AnyDesk**

Azure South

Microsoft Azure

**Reporting & Export Data**

Qlik Sense™

**Management Portal**
▶ Set Up & Manage Jobs
▶ Load Data
▶ Export Results
▶ Print Labels

## System Overview

The Signetor system consists of two main components: the management portal and the scanners. In the management portal, your organization is set up with users and scanners. Clients are organized under your organization, offering a straightforward structure. For each client, you can set up a location hierarchy, product catalogues, stock levels, and create jobs. The necessary scanners and users can be assigned to all jobs below your organisation.

Once configured, the assigned scanners download jobs via an internet connection. After download, no further internet access is needed, as all data is stored on the scanners. Scanning activity can be uploaded during breaks or at the end of the day. All scanner data is automatically consolidated in the Management Portal, with a comprehensive audit trail for all stocktakes.

## Catalogues

Stocktake catalogue information can be built exclusively with customer data, using Signetor master data or a combination of customer and Signetor product data. The objective is to ensure the highest product recognition during scanning allowing fast & accurate stocktakes.

▶ **Customer Supplied** – Customer catalogues can be loaded into the management portal. Barcodes can be GS1 or internal. Products can have more than one barcode per product when configured as aliases.

▶ **Hospital Clinical** – Many hospitals do not have an inventory system and / or have an incomplete list of product barcode information. To enable hospital stocktakes Signetor maintain a clinical product dataset with over 5 million barcodes that can be utilised to ensure fast & accurate stocktakes for hospital clients.

▶ **Pharmacy Catalogue** – Maintaining both Chemist + Druggist (C+D) and Irish Pharmacy Union data. It is possible to add additional wholesale catalogues and EPOS information to create a bespoke catalogue for your pharmacy customer.

# Label Printing

Print Staff ID, product shelf labels and location labels directly from the Management Portal. Allowing you to streamline your customers inventory controls, increasing accuracy and reducing the time required to stocktake.

# Scanner Barcode Coverage

- ▶ GS1
  - ❯ GTIN8, GTIN12, GTIN13, GTIN14
  - ❯ GS1-128 & GS1Data Matrix - Scan and decode
- ▶ Health Industry Barcode [HIBC]
- ▶ Internal Barcodes
  - ❯ Datamatrix
  - ❯ Code39
  - ❯ Code128
  - ❯ Codabar
  - ❯ Aztec

# Reports

- ▶ Customer Reports
  - ❯ Stock value by location & category
  - ❯ Expired Stock Value – See the value of expired stock by location.
  - ❯ Actual vs Expected stock levels
  - ❯ Bespoke Customer Reports
  - ❯ Full Data Export allowing external analysis of results.
- ▶ Management Reports
  - ❯ Audit trail with scan details: stock taker, location, product, date, and time
  - ❯ Activity of each stock taker.

# Training and Support

- ▶ Scanner Training
- ▶ User & Location Management
- ▶ Loading Data
- ▶ Setting Up Jobs
- ▶ Reports
- ▶ Hardware – Rent Additional Scanners if you have a very large job or an exceptionally busy period.

# SIGNETOR

## About Signetor

Founded in 2017, Signetor initially specialised in building stocktake and catalogue systems for healthcare environments. Today we manage a healthcare data set totaling more than 5 million product barcodes. In the past 3 years we have developed our system to support Retail, Wholesale, Manufacturing in addition to Pharmacy and Hospital markets. We're committed to continuously improving our system performance, expanding the product data we maintain, and learning how we can better support our Stocktake Partners.
